

YOU SICKEN ME-PLOT

MC wakes up in a hospital not knowing where he is, he notices he's in bad condition and chained up.

(Quero tentar dar menos informação ao jogador ent nao vamos ter o bad boy a falar já)

The player gets free and a key to proceed to the next room.

After a couple puzzles/ rooms the MC gives in and passes out

(Until there we may give signs of weakness to the player like coughing and small remarks)

He wakes up in a jigsaw type puzzle and gets some information from the nigga-boy, gets told about the virus and how he must continue forward in order to get the cure and out of there. The trap he is currently in must also be explained.

He keeps on going until he reaches a room with a npc with no leg in some kind of trap.

He must complete another puzzle in order to save them but upon completion the npc dies anyways.

(The npc should try to warn the player but the mouth will be muffled, the warnings' intensity should get higher as he's about to complete the puzzle like in that one [Dexter scene](#).)

The player follows to meet the nigger and asks why he did all this.

The nigger goes on to explain his distorted view on society and his experiment (he implies humans have gotten soft and that they will only show their true nature when on a life or death situation)

He then offers the player the cure, he has two choices either take it or use the weapon if he has it.

(This weapon will be a knife or something like that hidden on one of the rooms or maybe a secret passage, the player would need to get out of his way to get it or stumble upon it)

If he takes the “cure” he will get sedated and wake up on the chair from the previous room muffled and the game ends as he sees someone enter the room

Otherwise he will kill the nigga and find the real cure on his corpse, further details are yet to be discussed
